ERP transformation is ~~painful~~ profitable

Picture this:

The day has come. Your familiar SAP ECC has been replaced with SAP Cloud ERP. You open your laptop. And instead of confusion, you find clarity.

No headaches. No hunting for the right numbers. Just an intuitive system that feels familiar, only smarter. Faster. More aligned with how your business actually runs. That's what ERP transformation feels like with NTT DATA Business Solutions by your side.

Welcome to the new era of ERP: SAP Cloud ERP where the system you know meets the possibilities of the cloud.

The cloud is not where ERP belongs

The cloud is exactly where the real advantages live. From month-end closes that don't steal your weekends to updates that don't drain a year's budget, SAP Cloud ERP shows that ERP works better when it works in the cloud.

With NTT DATA Business Solutions, you get more than a system. You get a partner who knows the midmarket, brings the right mix of people and expertise, and guides you through every step of the journey. That's how we make cloud ERP work for your business, not the other way around.

1. Make it more intuitive yet familiar

If you're used to working with SAP ECC, SAP Cloud ERP will feel like home. Only better. With the same intuitiveness, you get access to even more benefits. And because it's designed around industry best practices, you don't need heavy customizations to support your processes. They're already there. From finance, to HR, to supply chain.

2. Get smarter insights with better dashboards & AI

SAP Cloud ERP offers improved dashboards that put all your data in one place in real time. Built-in analytics and AI help you forecast with confidence, automate repetitive tasks, and spot opportunities or risks before they surface. Because AI really comes to life in the cloud, you can turn data into the driver of your decisions, not just a record of them.

3. Boost efficiency without adding headcount

Thanks to streamlined workflows, automation and integrated AI, SAP Cloud ERP enables you to do more with the same people with less effort wasted on manual tasks. That way, you get more time to focus on what drives ROI, not on chasing Lisa for the latest sales report.

4. Stay current and compliant automatically

With SAP Cloud ERP, your platform evolves with you. Updates and upgrades build on the same foundation, continuously strengthening the system you already know. That way you can keep pace with new features, security demands, and regulatory changes without the major migrations every decade to abandon an outdated platform.

5. Keep costs predictable

With SAP Cloud ERP, all the essentials are part of the standard package, from global compliance to the core finance processes every company relies on. That means you get a functioning system from day one, at a predictable price, without the need for surprise add-ons. And if your company expands into new markets, you can add the extensions you need without having to switch to a new platform.

If it ain't broke, future-proof it

While your current ERP may still get the job done, SAP Cloud ERP takes you further. It keeps what works, makes it more intuitive, and adds the scalability and power of AI to carry your business into the future. No more patching on extras. No more heavy customizations. It's all about having everything integrated, future-ready, and built to grow with you.

With NTT DATA Business Solutions, you don't just get an implementation. You get a partner who knows your industry, speaks your language, and stays with you for the

long run. We bring industry-specific best practices without forcing one-size-fits-all solutions. And we back it with a global team trusted by everyone from the factory floor to the boardroom.
